Annexure I	
Passenger Traffic trends and forecasts	
for Metro airports 2	0
Annexure II	
Passenger Traffic trends and forecasts	
for non-Metro airports 2	2
Annexure III	
Upgradation/ improvement of CNS-ATM infrastructure:	
Projects in progress, projects to be taken up in 2006-2012 2	8
Annexure IV	
Proposed phased Capex in each of the thirty five non-Metro	
airports (excluding CNS-ATM and other equipments) 3	0
Annexure V	
Status of ongoing projects at the non-Metro airports 3-	4
Annexure VI	
Assumptions for the Financing Plan 4	0
Annexure VII	
Statement of Internal Resources of AAI:	
2005-06 to 2015-16 4	-2
Annexure VIII	
Cash Flow Statement: 2005-06 to 2013-14 4	4

Secretariat for Committee on Infrastructure

Preface

This Report outlines the financing plan for upgrading and augmenting the airport infrastructure in India. It responds to the direction of the Committee on Infrastructure, chaired by the Prime Minister, to evolve a plan for creating world-class airport infrastructure. The Report was prepared by a Task Force chaired by Shri Anwarul Hoda, Member, Planning Commission, and including experts and representatives from the Ministry of Civil Aviation, the Airports Authority of India, Planning Commission and Ministry of Finance. It was considered and approved by the Committee on Infrastructure in June 2006.

The quality of airport infrastructure contributes directly to a country's international competitiveness and economic growth by facilitating the smooth movement of people and high value cargo, spurring trade and tourism. In the past, airport development has not kept pace with the growth of the Indian economy, especially the quantum jump in passenger and cargo air traffic since 2002. As a result, several major airports are congested and offer inefficient services.

To ensure time-bound creation of world-class facilities, the Report recommends the development of Metro and greenfield airports primarily through Public Private Partnerships (PPPs). Greenfield airports at Bangalore and Hyderabad are already under construction through PPPs. Modernisation of Delhi and Mumbai airports through PPPs has also commenced. The modalities for improving airport infrastructure to international standards in Chennai and Kolkata are to be finalized after further consultations. In respect of non-Metro airports, the Task Force recommended that city-side development be undertaken by PPPs while the terminal and airside development be assigned to AAI, keeping open the possibility of PPPs in selected airports. The possibility of developing select non-Metro airports through wholly-owned subsidiaries of AAI would also be explored.

An investment of about Rs. 40,000 crore is projected for the development of airports during the period 2006-07 to 2013-14, of which approximately Rs. 31,000 crore is envisaged from PPPs. Implementation of development plans on these lines has already commenced.

mil

(Gajendra Haldea)

Introduction

1.1 In the years 2002-03, 2003-04 and 2004-05, the aircraft movement at the 126 airports managed by AAI increased by 10%, 13.5% and 12.6% respectively; passenger movement by 9.96%, 10.69% and 21.6% respectively; and cargo movement by 15%, 8.75% and 19.9% respectively.

1.2 Passenger traffic trends and forecasts for the Metro Airports at Delhi, Mumbai, Bangalore, Hyderabad, Chennai and Kolkata are indicated at Annex-I. These airports are being/ to be developed through Public Private Partnerships (PPPs). In addition, thirty five non-metro airports have been proposed for development by AAI. Their traffic trends and forecasts are indicated in Annex-II.

1.3 The Government is committed to policies that ensure time bound creation of world class airports and for this purpose to evolve a suitable policy and regulatory framework for Public Private Partnerships (PPPs) aimed at maximizing capital inflows and efficiencies. The Committee on Infrastructure (CoI) in its first meeting held on 10.12.2004 mandated that a framework for airport development up to 2010

would be planned assuming an annual traffic growth of 16%.

1.4 The broad contours of the airport development programme, as presented to the Committee on Infrastructure, are as given in Table 1.

1.5 Airports Authority has taken up the modernization of Delhi and Mumbai airports by adopting the Joint Venture route, wherein a Joint Venture Company (JVC) has been formed with 74% private equity stake and 26% equity stake of AAI. The maximum equity contribution by AAI would be Rs. 500 crore for each airport. The Delhi and Mumbai airports have been transferred to the JVC. Kolkata & Chennai airports would also be modernised through a suitable model.

1.6 In the third meeting of the Empowered Sub-Committee of the Committee on Infrastructure held on October 3, 2005, it was decided to set up a Task Force headed by Shri Anwar ul Hoda, Member, Planning Commission and comprising representatives of Ministry of Civil Aviation, Department of Economic

4 • Report of the Task Force

Affairs, Department of Expenditure, Planning Commission and AAI to deliberate and submit a financing plan for development of airports.

- **1.7** The Task Force was constituted as follows:
- (i) Shri Anwar ul Hoda, Member, Planning Commission
- (ii) Shri Adarsh Kishore, Finance Secretary
- (iii) Shri Askok Jha, Secretary, Department of Economic Affairs
- (iv) Shri Ajay Prasad, Secretary, Ministry of Civil Aviation
- (v) Shri Gajendra Haldea, Adviser to Deputy Chairman, Planning Commission
- (vi) Shri B. N. Puri, Adviser (Transport), Planning Commission
- (vii) Shri K. Ramalingam, Chairman, Airports Authority of India

1.8 The Task Force held meetings on 7th November, 2005, 6th January, 2006, 27th March, 2006 and 5th May, 2006 to formulate its recommendations. The Report of the Task Force was discussed and commended by the Empowered Sub-Committee of the Committee on Infrastructure in its meeting held on 15th May, 2006. The Report was considered by the Committee on Infrastructure in its twelfth meeting, held on 9th June, 2006 and approved with some modifications, which have been incorporated in the Financing Plan.

Capital costs of the development plan

Capex for Delhi and Mumbai airports

2.1 The development plans for Delhi and Mumbai airports envisage an investment of Rs. 5,270 crore and Rs. 6,130 crore respectively (totaling Rs.11,400 crore) during the period 2006-07 to 2013-14.

Capex for Kolkata and Chennai airports

2.2 The expenditure on these two airports has been considered at 50% of the expenditure of Delhi and Mumbai airports i.e. Rs. 5,700 crore, to be spent during the period 2008-09 to 2013-14.

Capex for greenfield airports

2.3 The following greenfield airports projects have been tentatively identified:

- (a) Bangalore
- (b) Hyderabad
- (c) Goa
- (d) Navi Mumbai
- (e) Pune
- (f) Greater Noida
- (g) Kannur

2.4 The greenfield Projects at Bangalore and Hyderabad are already under implementation. The estimated cost of Bangalore and Hyderabad airports is Rs. 1,410 crore and Rs. 1,760 crore respectively, adding up to Rs. 3,170 crore. These projects were initiated when traffic growth was comparatively low. It is expected that in order to meet the increased traffic, additional investments would become necessary. BIAL is already considering an additional investment of Rs. 400 crore. The estimated investment for these two airports could be assumed as Rs. 4,000 crore.

2.5 The estimated cost in respect of Navi Mumbai airport has been taken at Rs. 2,500 crore and the cost for other airports namely Goa, Pune, Greater Noida and Kannur has been taken at Rs.1,500 crore each. This would add upto Rs. 8,500 crore.

Capex on CNS-ATM and other equipment

2.6 In addition to the above, a sum of
Rs. 2,728 crore has been earmarked during
the years 2006-07 to 2013-14 for upgradation/
improvement of equipment. This includes a sum
of Rs.1,520 crore for CNS-ATM equipment,
Rs. 1,078 crore for other equipment and

Table 2: Planned Capex on equipment and
instrumentation(Rs. in crore)

Year	CNS-ATM Equipment	CNS Equipment for greenfield airports	Other Equipment	Total
2006-07	180		191	371
2007-08	350	50	100	500
2008-09	250	50	100	400
2009-10	140	30	87	257
2010-11	150		150	300
2011-12	150		150	300
2012-13	150		150	300
2013-14	150		150	300
Total	1,520	130	1,078	2,728

Rs. 130 crore for CNS-ATM infrastructure at greenfield Airports other than Hyderabad and Bangalore. A list of projects in progress and projects to be taken up is at Annex-III.

2.7 In addition, AAI has to invest Rs. 100 crore for upgradation of MET equipment at various airports during 2006-07, 2007-08 and 2008-09. This investment will be recouped from adjustments in the payments for meterological services made by AAI to the Met department.

Capex for thirty five non-metro airports

2.8 Ministry of Civil Aviation has proposed development of 35 non-metro airports, keeping in view the potential for traffic, tourism, business etc. The development of these airports was proposed in three Phases as follows:

- (a) Phase-I (10 airports): Ahmedabad, Amritsar, Guwahati, Jaipur, Udaipur, Trivandrum, Lucknow, Goa, Madurai and Mangalore. In case of project specific problems, some airports may need to be substituted.
- (b) Phase-II (15 airports): Agati, Aurangabad, Khajuraho, Rajkot, Vadodara, Bhopal, Indore, Nagpur, Vishakapatnam, Trichy, Bhubaneswar, Coimbatore, Patna, Port Blair, Varanasi.
- (c) Phase-III (10 airports): Agra, Chandigarh, Dimapur, Jammu, Pune, Agartala, Dehradun, Imphal, Ranchi and Raipur.

Additional airports will be taken up for development on need basis.

2.9 Preliminary estimates of the cost of providing infrastructure for the expected growth in passenger and aircraft traffic at 10 non metro airports have been prepared. Estimates for the remaining airports are yet to be prepared. The preliminary estimates for all the 35 airports, excluding CNS-ATM equipment, are indicated in Annex -IV. The Capex has been proposed under the three heads viz.

- (a) Terminal building, carpark and cargo;
- (b) Airside; and
- (c) City side (cargo complexes, hotels and flight kitchens)

2.10 AAI had proposed that the capital investment for commercial development of land (city side development) of non-Metro airports shall be made by private entities. It was proposed that out of their commercial revenues, private partners would pay land lease and revenue share to AAI. Based on the reports of the consultants for ten airports, an investment of Rs.1,150 crore had been projected for commercial development. In addition, an investment of Rs. 350 crore could be envisaged for the remaining airports.

2.11 As per the opinion of the Attorney General of India, only services/ facilities that have a relationship to the functions under Section 12 of AAI Act may be admissible at these airports. It would not be lawful for AAI to grant a lease to any person in respect of any airport property for the purpose of construction of independent golf courses, business parks, hi-tech parks, commercial offices, leisure facilities, commercial arcades, sport complexes, shopping complexes and convention centres which are primarily meant for general public and have otherwise no relationship with the functions of the AAI under Section 12 of AAI Act, 1994.

2.12 The above legal requirements would need to be kept in mind while formulating plans. The proposed commercial exploitation would be restricted to cargo complexes, hotels and flight kitchens. Parking could also be included if necessary. MoCA would formulate a Model Concession Agreement for this purpose and after inter-ministerial deliberations, submit it to CoI for approval.

2.13 The estimated expenditure on development of the 35 non-Metro airports is as shown in Table 3.

Table 3: Planned Capex on thirty five non-Metro airports (Rs. in crore)

Phase	Terminal Building, Carpark, Cargo	Air Side	City side	Total
Phase-I	1,496	420	1,050	2,966
Phase-II	1,240	682	300	2,222
Phase-III	530	294	150	974
Total	3,266	1,396	1,500	6,162

2.14 AAI Board has approved the master plans for the 10 Phase-I airports of Ahmedabad, Amritsar, Guwahati, Jaipur, Udaipur, Trivandrum, Lucknow, Goa, Madurai and Mangalore. The status of the works undertaken/ proposed to be undertaken is detailed in Annex-V.

Capex on aerodrome works at other non-Metro Airports

2.15 In addition to the 35 non-Metro airports covered under the MoCA proposal, an investment of Rs. 100 crore per annum in the period 2006-07 to 2013-14 has also been projected for upgradation, maintenance and renovation of the civil infrastructure at other non-Metro airports. This totals to an investment of Rs. 800 crore on non-Metro airports other than the above thirty five airports.

Capex on North East airports

2.16 An investment of Rs. 340 crore is envisaged for development of Paykong airport in Sikkim, Rs. 150 crore for Chiethu airport in Nagaland and Rs. 120 crore for Itanagar airport. This totals to an investment of Rs. 610 crore.

Award of concessions/ contracts

2.17 All concessions/ contracts for the above development works would be awarded by 2012 though actual expenditure may spill over to 2013-14.

Cost control

2.18 Development costs would be optimised by use of modular design of terminals and other facilities so as to avoid creation of excess capacity and enable additions in phases, as necessary. Moreover, the specifications should be economical, so that 'Budget' facilities are developed, thereby containing airport infrastructure costs. In particular, the example of 'Budget' terminal at Singapore was referred to.

Past expenditure and absorption capacity

3.1 Details of capital expenditure incurred by AAI during the past five years are shown in Table 4 below. The expenditure was incurred through contracts and provides a broad indication of AAI's capacity to absorb budgetary outlays of about Rs. 900 crore per annum under this mode.

Table 4: Past Capex on airports by AAI

			(Rs. in crore)
Year	Non-Metro airports	Metro airports	Total
2000-2001	237	112	349
2001-2002	249	70	319
2002-2003	283	162	446
2003-2004	444	122	566
2004-2005	442	164	606
2005-06 (RE)	606	346	952

3.2 Any significant increase in the annual allocation for the contract mode may be avoided so as to preserve the minimum requisite supervision and quality of works. It was, therefore, felt that AAI could take up annual investments in the range of about Rs. 1,000 crore per annum. This would include expenditure on civil works as well as on equipments.

3.3 In order to ensure on-time and on-cost delivery of projects in a scenario of significantly higher investments, spread over several locations, MoCA should examine the possibility of AAI hiring supervision consultants for assistance in project management, quality assurance etc.

Modes of delivery

4.1 Delhi and Mumbai airports have already been awarded on PPP mode. Greenfield airports at Bangalore and Hyderabad are already under implementation through the PPP route and the remaining greenfield projects would also follow the PPP route. The mode of development for Kolkata and Chennai airports is to be decided after further consultations.

4.2 In respect of non-Metro airports, MoCA's view is that since they are all loss making, they may not be attractive for private participation. The Ministry's assessment is also that assigning the modernization of these airports to AAI would contribute to harmonious industrial relations in that organization. Privatisation of these airports would also compound the problem created by the staff who would eventually be rendered surplus in privatized airports, as the idea was to relocate such staff in non-Metro airports. However, the possibility would be kept open to take up selected airports in the PPP mode.

4.3 The possibility of creating AAI subsidiaries for some of the larger non-Metro airports or for clusters of smaller airports would be explored with a view to creating independent entities that would be more responsive to local needs, besides enhancing the opportunities for raising the requisite resources.

Phasing and prioritisation

5.1 In light of the considerations spelt out in paragraph 4 above, the following course of action is to be adopted:

- (a) In principle, the airside and the terminal building development of non-Metro airports would be entrusted to AAI and it would be allowed to go ahead with construction work in respect of all the 35 airports.
- (b) Progress in execution of the development work should be reviewed in 18-24 months.
- (c) The possibility of going in for PPP in respect of a few selected airports should be kept open, taking into account the rapid development in the aviation sector in the country.
- (d) For selected airports, particularly the larger ones, wholly owned subsidiaries of AAI may be created for development and operation of the respective airports.

5.2 The capital expenditure for development of airports may be prioritised as under:

Table 5: Priority of different phases

Priority	Phase
1.	CNS-ATM & Other Equipment
2.	Phase-I
3.	North East airport
4.	Phase-II
5.	Phase-III
6.	Other aerodrome works

5.3 Major works should be taken up as part of a comprehensive airport project and not on a stand alone basis. While preparing such project reports for approval, due consideration should be given to the IRR requirements.

5.4 The implementation of this plan, including investment approvals would be subjected to the normal 'due diligence' associated with PIB/ PPPAC procedures.

Funding of the Capex programme

Delhi and Mumbai airports

6.1 The following funding pattern has been adopted as per the projections of the Financial Consultants of AAI:

Table 6: Funding of Delhi and Mumbai airports (Rs. in crore)

S. No.	Source	Funding
1.	Equity contribution by AAI	302
2.	Private Equity	1,200
3.	Internal Resources of JVC	2,298
4.	Borrowings of JVC	7,600
	Total	11,400

Chennai and Kolkata airports

6.2 The equity infusion by AAI for Chennai and Kolkata JVCs has been estimated as approximately 50% of the equity investments in case of Delhi & Mumbai airports. The equity infusion by AAI during the period 2008-09 to 2013-14 will be Rs.150 crore.

Greenfield airports

6.3 AAI Board had approved a policy whereby equity for greenfield airport projects would be funded by private entities (74%), State Government (13%) and AAI (13%, subject to a cap of Rs. 50 crore per airport). In future, wherever the State Governments express interest in development of greenfiled airports, they should be allowed to take the initiative.

6.4 The funding plan approved for greenfield projects at Bangalore and Hyderabad is as given in Table 7.

6.5 The details of estimated cost, phasing thereof and funding pattern are yet to be worked out/ frozen in respect of other greenfield airports. However, keeping in view the policy approved by the AAI Board for equity stake of AAI in such greenfield projects, a sum of Rs 200 crore has been provided in the financing plan as AAI's contribution to equity of greenfield airports that are likely to be developed by 2012.

Table 7: Approved funding plan for Bangalore and Hyderabad a	airports
--	----------

	HL	AL	BIA	L	
	Capital (Rs. in cr.)	Percentage of total	Capital (Rs. in cr.)	Percentage of total	
AAI Share	49	3%	43	3%	
State Support	422	24%	350	25%	
Equity of Private Promoters	330	19%	284	20%	
Loans	961	54%	735	52%	
Total	1,762	100%	1,412	100%	

CNS-ATM and other equipment

6.6 The expenditure on CNS-ATM and other equipments is proposed to be met out of internal resources of AAI.

Non-Metro airports

6.7 AAI has proposed to fund the entire airside and terminal development through its internal resources, surplus revenues from Delhi, Mumbai, Chennai and Kolkata and market borrowings. The funding of capital expenses on 35 non-Metro airports, except commercial development of land, is as given in Table 8.

Table 8: Funding of development of airside andterminals for non-Metro airports

		(Rs. in crore)
S. No.	Source	Amount
1.	Internal resources of AAI	3,116
2.	Upfront payment from JVCs - Delhi &Mumbai - Kolkata & Chennai	300 175
3.	Borrowings	1,000
4.	Min. of Defence & AP Govt. for Vizag project	71
	Total	4,662

6.8 In addition to the above, it is assumed that private sector investment aggregating Rs. 1,500 crore would be deployed on non-aeronautical facilities such as cargo complexes, hotels, flight kitchens and parking. The proposed investments by the private sector would be undertaken on the basis of a duly approved MCA.

Aerodrome works at other non-Metro airports

6.9 The proposed expenditure of Rs. 800 crore on other aerodrome works would be met out of internal resources of AAI.

Sources of Financing

Assumptions

7.1 For evolving a financing plan, the Task Force adopted a set of assumptions which have been stated at Annex-VI.

7.2 For Metro and greenfield airports, the projected private investment has been taken into account and only the investment to be made by AAI in equity and CNS-ATM has been included in the financing plan of AAI.

Public Private Partnerships (PPPs)

7.3 The total investment from PPPs is projected as given in Table 9.

Table 9: Projected Investments from PPPs in airports (Rs. in crore)

S. No.	Airport	Private Investment
1.	Delhi and Mumbai	11,400
2.	Bangalore and Hyderabad	4,000
3.	Chennai and Kolkata	5,700
4.	Five Greenfield airports	8,500
5.	City side development	1,500
	Total	31,100

Internal Resources of AAI

7.4 AAI has been funding its capital expenditure primarily out of its internal resources. AAI had General Reserves of Rs. 1,940 crore and other Reserves of Rs. 1,037 crore as on 31.03.2005. Its loan liabilities are insignificant, with total loans as on 31.3.2005 aggregating Rs. 121 crore. The profit after tax generated by AAI in the last five years is shown in Table 10.

Table 10: Profits of AAI

				(Rs. i	n crore)
Particulars	2000-01	2001-02	2002-03	2003-04	2004-05
Revenue	1873	2245	2384	2631	3000
Expenditure	1514	1768	1887	2087	2315
Profit before tax	359	477	497	544	685
Profit after Tax	244	267	282	345	325

7.5 Based on the assumptions in Annex-VI, the projections of net internal resources available for financing capital expenditure are shown in Annex-VII. These internal resources will be used to fund the entire airport development programme including investments in CNS-ATM and other equipments.

ADF/ UDF charges

7.6 It was suggested by AAI that most of the projects being contemplated under the non-Metro airports development initiative pertain to Airside and Terminal Buildings and the projects are likely to yield either negative IRR or an IRR below the PIB norm of 12%. As such, levy of ADF/ UDF on passengers at these airports was proposed.

7.7 The Task Force felt that users should not be burdened with ADF/ UDF for financing un-viable projects. This is particularly important in the context of the policy objective to make civil aviation a mass rather than an elitist mode of travel and to make air travel more affordable. Accordingly, the financing plan does not include revenue from ADF/ UDF charges. Recourse to ADF/ UDF should be the last resort in individual cases after all efforts at implementation through PPP have not succeeded.

7.8 In respect of projects that are economically desirable on grounds such as regional development, tourist and strategic importance etc, but with low financial viability, the following parameters may be adopted:

- (a) While calculating the viability for individual projects, a growth rate of 16% or more for 5 years and 12% for the next 10 years may be assumed considering the robust growth in recent years as also location-specific considerations.
- (b) The current PIB norm of 12% IRR should be relaxed to 8%. In case of North East States it could be relaxed to 0%.
- (c) In case AAI is required to take up projects with IRR below the level specified in (b) above, the respective State Governments may be asked to bridge the gap. In addition, projects with low IRR could also use the Viability Gap Funding.

Budgetary support

7.9 The financing plan for the entire airport development programme in its present form does not envisage any budgetary support to AAI.

Private investment on city side facilities

7.10 It has been assumed that private sector funding aggregating Rs. 1,500 crore would be

available for hotels, cargo complexes, flight kitchens and parking.

Borrowings

7.11 The shortfall between the inflows from all sources and the projected outflows is proposed to be met out of market borrowings. However, these borrowings should be capped by the ability of AAI to repay. It is, therefore, recommended that borrowings may be allowed such that the debt service obligations do not exceed 50% of the profit before tax over the debt tenure.

Private Financing and Viability Gap Funding

7.12 In taking a decision on seeking to develop selected airports on PPP basis in future (as enumerated in paragraph 5.1) it should be borne in mind that upto 20% of the capital costs could be financed through capital grants under the scheme for support to PPPs in Infrastructure. This would increase the possibility of attracting the private sector for participation in the development of airport infrastructure.

Financing Plan

7.13 The cash flow statement based on the assumptions at Annex-VI and the above sources of financing is at Annex-VIII.

Recommendations of the Task Force

Capital costs of the development plan

8.1 The projected investments for the period 2006-07 to 2013-14 are Rs. 2,828 crore for equipment and instrumentation, including CNS-ATM; Rs. 11,400 crore for Delhi and Mumbai airports; Rs. 5,700 crore for Kolkata and Chennai airports; Rs. 12,500 crore for seven greenfield airports including Bangalore and Hyderabad; Rs. 4,662 crore for development of airside and terminal buildings for 35 non-Metro airports; Rs. 1,500 crore for cityside development of 35 non-Metro airports; Rs. 610 crore for development of greenfield airports in North East and Rs. 800 crore for other aerodrome works. This amounts to a total investment of Rs. 40,000 crore. All concessions/ contracts would be awarded by 2012 though actual investments may spill over to 2013-14. The assumptions used for making financial projections are stated at Annex-VI.

Modes of delivery

8.2 Metro airports and greenfield airports have been earmarked for development through the PPP mode. However, the modalities for Kolkata and Chennai would be decided after further consultations.

8.3 In the interest of harmonious industrial relations, the terminal and airside development of non-Metro airports should be assigned, in principle, to AAI. However, the possibility of going in for PPP at anytime in respect of a few selected airports not being taken up immediately by the AAI, should be kept open, taking into account the rapid developments

in the aviation sector in the country. The following course of action is to be adopted:

- (a) In principle, the airside and the terminal building development of non-Metro airports would be entrusted to AAI and it would be allowed to go ahead with construction work in respect of all the 35 airports.
- (b) Progress in execution of the development work should be reviewed in 18-24 months
- (c) The possibility of going in for PPP in respect of a few selected airports should be kept open, taking into account the rapid development in the aviation sector in the country.
- (d) For selected airports, particularly the larger ones, wholly owned subsidiaries of AAI may be created for development and operation of the respective airports.

Public Private Partnerships (PPPs)

8.4 The total investment expected from PPPs in four Metro airports, seven greenfield airports and city side development is Rs. 31,100 crore. This would be suitably adjusted if Kolkata and Chennai airports are developed through an alternative modality. An Action Plan should be drawn up to mobilize these investments within the stipulated timeframe.

Phasing of development works at non-Metro Airports

8.5 Development of airports by AAI would require financing, monitoring and supervision

of the development works which should be taken up in a phased manner. The capital expenditure for development of airports by AAI may be prioritised as under:

Table 11: Priority of different Phases

Priority	Phase
1.	CNS-ATM & Other Equipment
2.	Phase-I (10 non-Metro airports)
3.	North East airport
4.	Phase-II (15 non-Metro airports)
5.	Phase-III (10 non-Metro airports)
6.	Other aerodrome works

8.6 Subject to its capability to manage financing and construction, AAI would go ahead with construction work in respect of all the 35 non-Metro airports. Progress in execution of the development work should be reviewed in 18-24 months.

8.7 Major works should be taken up as part of a comprehensive airport project and not on a stand alone basis. While preparing such project reports for approval, due consideration should be given to the IRR requirements and the requisite approvals of PIB/ PPPAC/ CCEA would apply as usual.

Investment decisions on individual projects of AAI

8.8 In respect of projects that are economically desirable on grounds such as regional development, tourist and strategic importance etc, but have low financial viability, the following parameters may be adopted:

- (a) While calculating the viability for individual projects, a growth rate of 16% or more for 5 years and 12% for next 10 years may be assumed.
- (b) The current PIB norm of 12% IRR should be relaxed to 8%. In case of North East States, it could be relaxed to 0%.
- (c) In case AAI is required to take up projects with IRR below the level specified in (b) above, the respective State Governments may be asked to bridge the gap. In addition, projects with low IRR could also use the Viability Gap Funding.

City side development

8.9 Keeping in view the opinion of the Attorney General on land use, the plans for city side development will be restricted to the purposes covered under the AAI Act. The likely investment in PPPs on city side development is estimated at Rs. 1,500 crore. The proposed commercial exploitation could include cargo complexes, hotels, flight kitchens and parking.

8.10 MoCA should formulate a Model Concession Agreement for this purpose and after Inter-Ministerial clearance submit it for approval of CoI.

Budgetary Support

8.11 AAI has projected sufficient internal resources to finance the development plan for non-Metro airports. Over and above these projections, private sector participation in city

side facilities is visualised. As such, there is no need of any budgetary support for the programme.

Borrowings

8.12 The shortfall between inflows from all sources and the projected outflows is proposed to be met out of market borrowings. However, these borrowings should be capped by the ability of AAI to repay. Borrowings may be allowed such that the debt service obligations do not exceed 50% of the profit before tax over the debt tenure.

ADF/ UDF

8.13 ADF/ UDF charges would add to travel costs unnecessarily and the Task Force did not, therefore, recommend any new charges. Secretary, Civil Aviation felt that the option should not be foreclosed. Finance Ministry (Department of Expenditure) also supported the same stand. The Planning Commission was of the view that costs should be kept low and available resources should be leveraged by AAI, if necessary, through PPP. The Task Force was of the view that recourse to ADF/ UDF should be the last resort in individual cases after all efforts at implementation through PPP have not succeeded.

Viability Gap Funding

8.14 In taking a decision on seeking to develop selected airports on PPP basis in future (as enumerated in paragraph 5.1) it should be borne in mind that upto 20% of the capital costs

could be financed through capital grants under the scheme for support to PPPs in Infrastructure. This would increase the possibility of attracting the private sector for participation in the overall development of airport infrastructure.

Development through subsidiaries of AAI

8.15 The possibilities of creating AAI subsidiaries for some of the larger non-Metro airports would be explored with a view to creating independent entities that would be more responsive to local needs besides enhancing the opportunities for raising the requisite resources.

Cost control

8.16 Development costs would be optimised by use of modular design of terminals and other facilities so as to avoid creation of excess capacity and enable additions in phases, as necessary. Moreover, the specifications should be economical, so that 'budget' facilities are developed, thereby containing airport infrastructure costs.

Project Management

8.17 In order to ensure on-time and on-cost delivery of projects in a scenario of significantly higher investments, which would be spread over several locations, MoCA should examine the possibility of AAI hiring supervision consultants for assistance in project management, quality assurance etc.

Annexure III

Upgradation/ improvement of CNS-ATM infrastructure: Projects in progress

S. No.	Project	Details	Date of Completion
1	Dedicated Satellite Communication Network	To connect 80 airports for providing dedicated channels for voice and data to support air-ground as well as ground- ground communication.	Apr 2006
2	Voice Communication Control System	Being provided at 8 airports. Installation complete at 5 airports.	Mar 2006
3	Integration of radar data processing system and Flight Data Processing System	Being done at 6 airports	Jun 2006
4	Automatic Dependence Surveillance- contract/ CPDLC system	Installed at Mumbai and Delhi	Under test operation
5	Advanced Surface Movement & Control System	Under installation at IGI Airport	Mar 2006
6	Addition of one aircraft capable of flying at high altitudes	For augmentation of flight inspection capability.	Jun 2006
7	Visual Tower Simulator	Augmentation of ATC training facility at Civil Aviation Training College	
8	Procurement of 40 DMEs		Dec 2007
9	Procurement of ILS		Mar 2008
10	CCTV Surveillance System	Perimeter security systems at selected airports (6 airports as of now)	Mar 2006
11	Flight Information Display System	At selected airports (7 airports as of now)	Aug 2007
12	Provision of Global Navigation Satellite System		Dec 2008
13	Implementation of GAGAN Project in coordination with ISRO		Dec 2008

S. No.	Project	Start Date	Compl. Date
1	Flight Data Processing System at Hyderabad and Mangalore	Apr 2006	Mar 2007
2	Provision of CNS equipments at new Greenfield airports at Bangalore and Hyderabad	Apr 2006	Mar 2008
3	Airport Surveillance Radar and MSSR at Amritsar and Cochin	Apr 2006	Mar 2008
4	Provision of MSSRs at few locations to cover radar gaps	Apr 2006	Mar 2008
5	Networking of radars	Apr 2006	Dec 2008
6	Augmentation of RCAG VHF coverage for continental air space	Mar 2006	Mar 2007
7	Provision of Aeronautical Handling System and ATN Router at Mumbai	May 2006	Dec 2007
8	Surface Movement Guidance and Control System at Mumbai, Kolkata and Chennai	Apr 2006	Dec 2008
9	Ground based augmentation System at two airports	Apr 2006	Dec 2008
10	Provision of Digital Automatic Terminal information equipments at selected airports	Apr 2006	Dec 2007
11	Pre-departure clearance facility via data link at Mumbai and Delhi	Apr 2006	Dec 2007
12	Upgradation of Automation system at Mumbai and Delhi		
13	Replacement of equipment as decided, purchase of various ATC and electronic ancillaries		
14	Introduction of ADS-B technology for surveillance purpose as a supplement of MSSRs	Intend to buy one for gaining exper	e system in 2006-07 ience
15	Introduction of Data Communication in air ground communication purposes	To be decided	
16	Augmentation of aeronautical telecom network.	To be decided	
17	Upgradation of automation system at Kolkata and Chennai	To be decided	
18	Ground based augmentation system at selected airports	To be decided	
19	Introduction of other systems or technologies as approved by ICAO	As and when dec	ided by ICAO

Upgradation/ improvement of CNS-ATM infrastructure: Projects to be taken up in the period 2006-2012

PUNE			
1.	Works for expansion and modificaiton of existing Terminal Building.	10	In progress
2.	Expansion of Apron and New Taxi link	_	NIT being finalised

Annexure VI

Assumptions for the Financing Plan

1. Effect of restructuring

1.1 Expenditure and revenue projections for 2006-07 onwards are based on the assumption that the Delhi & Mumbai airports would be transferred to JVCs from 1st May, 2006. Expenditure and revenue projections for 2008-09 onwards are based on the assumption that Chennai & Kolkata airports would be taken up w.e.f. 1st April, 2008. Depending upon the modality chosen, the assumptions relating to Kolkata and Chennai may need to be modified.

1.2 The upfront payments from JVCs have been considered as Rs. 150 crore each for Delhi & Mumbai airports, Rs. 100 crore for Chennai and Rs. 75 crore for Kolkata.

1.3 The income from revenue share of Delhi & Mumbai JVCs has been considered as per the share of revenue quoted by the winning bidders. This is 45.99% of the gross revenue for Delhi airport and 38.7% for Mumbai airport. While calculating the share of revenue, landing charges, cargo income and income from non traffic revenue (excluding interest on investments) have been considered. The revenue surplus from Chennai & Kolkata has been assumed as 10% of the gross revenue.

1.4 The income from dividend from JVCs of Delhi & Mumbai has been assumed as per projections made by Financial Consultant. No dividend income from Chennai & Kolkata has been considered.

1.5 The projections done by Financial Consultants for AAI's equity contribution

of Rs 376 crore in the JVCs of Delhi & Mumbai during 2006-07 to 2023-24 has been adopted. Accordingly a capital contribution to JVC of Rs. 302 crore over the period 2006-07 to 2015-16 has been provided for in the financing plan. It has been assumed that in case of Chennai & Kolkata JVCs, AAI will contribute capital from 2008-09 onwards, to the extent of 50% of the equity contribution for Delhi & Mumbai airports.

1.6 Impact of closure of existing airports at Bangalore & Hyderabad airport have been considered in the year 2008-09.

2. Revenue projections

2.1 No revenue from new investments made in development of non-Metro airports has been considered.

2.2 Revenue projections are based on the assumption that there will be no increase in rates of airport charges, PSF and cargo charges. Further, no revenue from ADF and UDF has been considered.

2.3 Revenue streams from Route Navigation and Facilitation Charges (RNFC), Landing and Terminal Navigation and Facilitation Charges (TNLC) shall continue to accrue to AAI. For the projection of RNFC, Landing and TNLC, the growth in traffic has been assumed as 10% per annum over the base year 2006-07. No increase in airport charges has been assumed.

2.4 The growth in revenue from Passenger Service Fee (PSF) has been assumed as 10% per annum. The growth in Cargo revenue has been assumed as 5% per annum. The growth in Non Traffic revenue has been assumed as 7.5% per annum over the base figure of 2006-07.

2.5 Income from investments on short term deposit has been worked out @ 6% p.a. on the closing balance of funds for each year.

3. Expenditure projections

3.1 An increase of 15% has been made towards pay revision in the year 2007-08, as pay & allowances are due for revision from 01.01.2007. Expenditure on pay and allowances has been assumed to grow @ 7% per annum. It has been assumed that 25% of staff deputed to private operator will rejoin AAI after 3 years deputation period. Effect of the same has been considered in years 2008-09 & 2011-12. The effect of introduction of VRS has not been considered.

3.2 Expenditure on Repairs & Maintenance, Stores, Electricity, Water charges and Security has been assumed to grow @ 7% p.a. and Other Expenses have been assumed to grow @ 5% p.a. over the base figures of year 2006-07.

3.3 Depreciation benefits of leased assets will be available to AAI even after Leasing. A project completion period of 2 years has been assumed for fresh capital expenditure. Depreciation has been worked out @ 7.31% p.a. on straight line basis.

3.4 The rate of interest on borrowing has been taken as 9% p.a. Repayment of borrowings has been assumed in 7 equal annual installments with a moratorium of 2 years on repayment of principal.

3.5 Dividend payout to GOI has been considered at 20% of Equity or Profit after Tax (PAT) whichever is higher. For calculation of dividend, equity capital as on 31.03.2005 has been considered.

3.6 Capital expenditure as detailed in paragraph 2 of this report would be incurred.
